

jessica claire montgomery street san francisco ca 94105 555 4321000 resumesampleexamplecom summary
graduate student university california irvine scientific background computational biology pharmaceutical
science interested computational approaches pharmaceutical therapeuticsbased research expertise
computational multiomics machine learning drug design platforms skills programming skills r intermediate
python basic shell bash scripting basic os platform linux windows cluster distributed computing hpc
ngs data processing bulk rna seq atacseq database experience gene expression omnibus geo sequencing
read archive sra single cell expression atlas sequencing alignment sra toolkit bedtools bowtie2
star picard tools samtools sequencing quantification macs2 featurecounts kallisto tximport rnanorm
differential expression pathway enrichment ontology analysis edgeR DESeq2 GPROFILER2 HOMER DAVID
INGENUITY pathway analysis IPA experience data science intern 012023 current covance baltimore md multi
omic data integration paired expression chromatin accessibility PECA multiomics factor analysis MOFA
network biology transcription factor target gene interaction network Cytoscape IPA centrality calcula
tion CytoHubba data visualization ChIPseeker Cytoscape integrative genomics viewer IGV adobe illu
strator machine learning data curation feature selection model building hyperparameter optimization r
regression classification models neural network random forest XGBoost models Python sklearn tensorflow
keras pytorch development machine learning models predict pharmacokinetic quantum mechanical prop
erties molecules using accelerating therapeutics medicine model learning pipeline AMPL experience ge
nerative molecular design model testing validation PhD graduate 092017 current CENERGY freeport ny u
tilized machine learning analysis multiomic data integration identify key regulatory network changes
stem cell reprogramming gained expertise transcriptional epigenetic data processing analysis method
s implemented network theory centrality calculations identify impediments reprogramming efficiency b
ecame proficient using stem cell models drug characterization mechanistic understanding effects phar
maceutical agents communicated research results conference presentations departmental research prese
ntations scientific publications supported department faculty administrative assistance well curricu
lum research support teaching assistant upper division course stem cell biology regenerative medicin
e served mentor high school undergraduate students youth research summer science program women ste
m system girls engineering change GEC outreach board leader RLadies Irvine chapter research technician
082016 062017 childrens hospital philadelphia city state developed autoimmune disease models using c
risprcas9 system acquired computational skills sequencing genomic data education training PhD biolog
ical chemistry computational biology 092023 university california irvine irvine ca thesis investigat
ing mechanism cellular reprogramming bachelor arts biology 052016 bryn mawr college bryn mawr pa stu
